Random forests - classification description

Cluster analysis or clustering is the task of grouping a set of objects in such a way that objects in the same group (called a cluster) are more similar (in some sense) to each other than to those in other groups (clusters). It is a main task of exploratory data mining, and a common technique for statistical data analysis, used in many fields, including machine learning, pattern recognition ...

Cluster analysis - Wikipedia

k-means clustering is a method of vector quantization, originally from signal processing, that is popular for cluster analysis in data mining. k-means clustering aims to partition n observations into k clusters in which each observation belongs to the cluster with the nearest mean, serving as a prototype of the cluster. This results in a partitioning of the data space into Voronoi cells.

Data Mining i About the Tutorial Data Mining is defined as the procedure of extracting information from huge sets of data. In other words, we can say that data mining is mining knowledge from data.

About the Tutorial

Bamshad Mobasher - DePaul University

Data mining as a process. Fundamentally, data mining is about processing data and identifying patterns and trends in that information so that you can decide or judge.

Prof. Dr. Knut Hinkelmann 6 Classification Schemes 3 Classification Classification is an organization means arranging information items into classes - dividing the universe of information into manageable and logical portions. A class or category is a group of concepts that have something in common. This shared property gives the class its identity.

LFW Results by Category Results in red indicate methods accepted but not yet published (e.g. accepted to an upcoming conference). Results in green indicate commercial recognition systems whose algorithms have not been published and peer-reviewed. We emphasize that researchers should not be compelled to compare against either of these types of results.
