Solid is one of the four fundamental states of matter (the others being liquid, gas, and plasma). In solids molecules are closely packed. It is characterized by structural rigidity and resistance to changes of shape or volume. Unlike liquid, a solid object does not flow to take on the shape of its container, nor does it expand to fill the entire volume available to it like a gas does.

Inorganic chemistry is the study of the synthesis, reactions, structures and properties of compounds of the elements. This subject is usually taught after students are introduced to organic chemistry, which concerns the synthesis and reactions of compounds of carbon (typically containing C-H bonds).

Is it "Healthcare" or Disease Care?. True "healthcare" would be the care of the very basic unit of life, which as we know is the human cell. This comprehensive care would begin in our very early years, conceivably from conception, involving a system focused on the healthy maintenance of the cells and thus, the non-interference of cellular function, and subsequently unaltered DNA ...
