Electromagnetic Simulators – An Electromagnetic Simulator is a modeling tool that: – solves electromagnetic field problems by numerical analysis; – extracts engineering parameters from the field solution and visualize fields and parameters; – allows design by means of analysis combined with optimization (PSO, GA, parameterized models, etc.).

Computational Methods for Electromagnetics is designed for graduate-level classroom use or self-study, and every chapter includes problems. It will also be of particular interest to engineers working in the aerospace, defense, telecommunications, wireless, electromagnetic compatibility, and electronic packaging industries.

1.0 Computational Electromagnetics Laboratory The Computational Electromagnetics (CEM) Laboratory is used for full -wave, frequency domain electromagnetic simulations. The laboratory houses a computer cluster dedicated to CEM analysis. The cluster currently contains 476 processors and 1.95 TB of Random Access Memory (RAM).

Modern computational methods have become widely used in exploration geophysics. For many years, the basic model for interpretation in electromagnetic (EM) geophysics was a one-dimensional (1-D) model of a layered earth or a two-dimensional (2-D) model
