An electronic health record (EHR), or electronic medical record (EMR), is the systematized collection of patient and population electronically-stored health information in a digital format. These records can be shared across different health care settings. Records are shared through network-connected, enterprise-wide information systems or other information networks and exchanges.

Introduction. It is said that over 80% of diagnoses are made on history alone, a further 5-10% on examination and the remainder on investigation. [] Whether this adage is true or not may be open to debate but it is clear that history and examination skills remain at the very core of clinical practice.
